

For Immediate Release

Codan Radio Communication's 2210 Envoy High Frequency Radio Achieves Department of Defense's Joint Interoperability Test Command (JITC) Certification

Ashburn, Virginia – Codan Radio Communications, 28 October 2016. Codan Radio Communications (ASX:CDA) announces the Joint Interoperability Test Command (JITC) certification for its 2210 Envoy HF Radio supporting Codan's position as a tactical communications leader with secure interoperable standards in support of the Department of Defense (DoD) and their partner networks.

JITC verifies product interoperability for all products used in the DoDs' networks. The certification affirms that the Codan 2210 Envoy radio is qualified as conforming to the Automatic Link Establishment (ALE) requirements of Military Standard MIL-STD-188-141B, Interoperability and Performance Standards for Medium and High Frequency (HF) Radio Equipment.

Furthermore, the JITC certification guarantees interoperability between Codan and other HF radio suppliers to establish a common waveform for ALE operation. This is crucial for humanitarian, coalition, and Partnership for Peace (PfP) operations during emergency responses and disaster relief efforts. Within minutes of a radio operator initiating a call, ALE selects the best frequency available and alerts the operators on both ends to begin communicating with each other immediately. One of the many benefits of ALE is that it eliminates the need for repetitive calling on pre-determined time schedules and also the monitoring of static on HF radios.

"JITC certification insures our customers that the Envoy meets interoperability criteria with other HF radios according to the DOD standard," asserted John Robins, Codan's Director of UN and US Business Development. "Achieving JITC certification demonstrates Codan's serious investment in defense applications to support the need for interoperable platforms between coalition and PfP countries."

The JITC certification confirms the 2210 Envoy radio surpasses the highest interoperability and security standards for execution in US military operations, UN peacekeeper and humanitarian efforts, and to secure communications in partner nations. Codan's Envoy 2210 is now listed on the JITC website at <http://jitic.fhu.disa.mil/projects/hf/index.aspx#141B>.

About Codan Radio Communications

Codan Radio provides communications solutions that enable our customers to save lives, create security and support peacekeeping worldwide. Trusted by the world's largest mission critical, security, military and humanitarian agencies, we've built our reputation for reliability and customer satisfaction over 60 years in High Frequency and Land Mobile Radio communications, in some of the toughest conditions on the planet.
